

## 6. The Future

The rapid developments that are taking place in the understanding of the lower levels of the structure of the human genetic tree, mean that new light is constantly being thrown on the genetic identification of the origins of these Manx families at a level of definition hitherto unknown. For this reason, it is expected that this study will continue to run for some time yet before it can be meaningfully concluded. The emphasis within the project however will shift away progressively from recruitment and more to deeper analysis, as the large majority of Manx family names are tested.

Further financial support will continue to be required and anyone wishing to take part in or support the project should first of all contact John Creer via the Manx Y-DNA study website at [www.manxdna.co.uk](http://www.manxdna.co.uk).

## Acknowledgements

Over the last five years I have approached and cajoled large numbers of people having an interest in their early Manx family history seeking support, both direct and indirect for this ground-breaking project. Whilst no formal Manx institution (including the Manx Museum) has responded to my multiple appeals, many other generous individuals have contributed their time, knowledge, expertise and their money in order for the study to progress as far as it has today.

If the results of this study ever achieve any significance or meaning for the people of the Isle of Man then it is those people who have participated in or supported the project financially who should get the credit. The following list of names is probably not totally exhaustive but I will do my best to acknowledge them all.

So big thanks to (in no particular order):- Quintin Kneen, Robin Crellin, Geoff Gelling, Michael Callister, Pat Bregazzi, Chris Keig, Sue Pedersen, Nigel Crowe, Jim Smith (Jurby Jim!), Philip Allan, John Kissack, Gary Clucas, Gary Morrison, Greg Kaighin, Jeff Condra, Paula Anderson, Chet Wurtz, Colin Farrell, Peter Brew, Alan B Oates, Peter Quirk, Bernadette Weyde, Mark Jost-Watterson, Juan Codere, Diana Banks, Allan Kissack, Lynn Quinlan, Dr Lou Mylecraine. I apologise for any omissions.

## Disclaimer

The results and analysis being reported for the Manx Y-DNA Study are inevitably work in progress. New information may come to light over time which changes something which has been stated previously. This work is carried out on a best endeavours basis and should there be any errors of omission or commission then the study organisers in good faith will do their best to rectify such errors, but cannot be held liable for any consequences.
